

# ADA Ramp for Kid Timbers

***New Product Release - 6/19/03  
Little Tikes Commercial Play Systems***

LTCPS’s new ADA Ramp provides a creative and fun, yet simple solution to ADA playground accessibility. Although it complies with ADA standards, it is by no means only a ramp. It provides an element of play value through its animal tracks found on the ramp surface which can be matched by the corresponding animals located along its sides. Optional back to back configuration ensures smooth transition to playground even after settling of ground cover. No matter what the configuration of the playground, the ADA Ramp can be added as another component for both fun and accessibility

### Key Features

- Large footprint – 60 inch width and 1/20 slope complies with accessible route criteria as dictated by ADA Guidelines
- Matching game built into design (animals with corresponding footprints)
- 128 kiss-offs built into the design provide supreme structural integrity
- Flexibility of Kid Timber connection can accommodate even the most complex playground layouts

### Product Specifications
